A QUICK NOTE

No exterior cleaning lasts forever. Your property is constantly exposed to rain, wind, dirt, algae, moss and airborne spores. Over time, nature will gradually return — this is completely normal.

The good news is that regular maintenance is far easier and more cost-effective than waiting until surfaces become heavily soiled again.

RECOMMENDED MAINTENANCE SCHEDULE

Patios & Paths	Professional clean every 12 months
Block Paving Driveways	Professional clean every 12–18 months (plus regular weed control)
Tarmac Driveways	Approximately every 2–4 years, depending on whether the surface has been restored / sealed and the level of use
Render	Maintenance soft wash every 2–5 years
Gutters	Professional clearance every 6–12 months (essential preventative maintenance)

01

Patios & Paths

Very little maintenance is required.

Over time, algae and organic growth will gradually return. This is completely normal.

The best way to keep your patio looking its best is to have it professionally cleaned approximately every 12 months, before heavy build-up returns.

Block Paving Driveways

Cleaning removes existing weeds, but new weed seeds are constantly blown in by the wind and will germinate over time.

To keep your driveway looking its best:

- Apply a suitable weedkiller several times each year, or
- Remove small weeds by hand as soon as they appear.

Don't let a few weeds spoil an otherwise beautifully clean driveway.

A professional maintenance clean is recommended every 12–18 months.

Tarmac Driveways

If light algae begins to return, a product such as Wet & Forget can help slow regrowth.

If your driveway has been treated with a tarmac restorer, its appearance will generally last longer.

A professional maintenance clean is typically recommended every 2–4 years, depending on the condition of the surface.

Render

Your render has been professionally soft washed and treated with a professional biocide.

The biocide continues working long after the clean has been completed, helping to inhibit future organic growth. Simply leave the biocide to do its job.

Please avoid pressure washing your render, as this can damage the finish.

A maintenance soft wash is typically recommended every 2–5 years, depending on the property's location and exposure.

Gutters

Annual gutter maintenance is one of the most important things you can do to protect your home.

I recommend having your gutters professionally cleared every 6–12 months to help prevent blockages, overflowing water, damp and unnecessary repairs.

If you notice any overflowing water, leaks or loose guttering before then, simply get in touch.

THANK YOU

Thank you again for choosing Power Wash Pro. I look forward to helping you keep your property looking its best for years to come.

Andrew
